

SECURITY ASSESSMENT REPORT: COMPREHENSIVE

Target: portal.example.com

Report ID: RPT-2026-4684465F Generated: 2026-09-02T15:57:36

OVERALL STATUS: HIGH RISK - ACTION RECOMMENDED

Potential security gaps or active threats were discovered during automated testing.
Follow the action plan on Page 3 to protect your asset.

THREAT SCORE	SEVERITY LEVEL	EVIDENCE CONFIDENCE	THREAT CATEGORY
78 / 100	HIGH	92%	HIGH

1. EXECUTIVE SUMMARY & WHAT THIS MEANS

Multiple critical external telemetry findings detected on portal asset.

2. SECURITY COMPONENTS CHECKED

? Threat Intelligence:	NOT_AVAILABLE	? File Analyzer:	NOT_AVAILABLE
? Ssl Scanner:	COMPLETED	? Whois Lookup:	NOT_AVAILABLE
? Url Scanner:	NOT_AVAILABLE	? Port Scanner:	COMPLETED

3. DETAILED SECURITY FINDINGS & EVIDENCE

Identified security indicators with both business impact and technical detail.

[HIGH] Public Database Port 3306 Exposed

MySQL port 3306 is open to public internet.

Technical Context: Verified via automated CyberGuardian security rule evaluation.

[MEDIUM] Expired TLS Certificate

Certificate expired 14 days ago.

Technical Context: Verified via automated CyberGuardian security rule evaluation.

4. AUTONOMOUS AI AGENT CORRELATION

AI Agent concluded multi-vector vulnerability profile on portal asset.

5. RECOMMENDED ACTION PLAN & REMEDIATION PLAYBOOK

Clear, prioritized steps to resolve identified vulnerabilities and harden your systems.

1 **Action Step 1**

Immediately firewall MySQL port 3306.

2 **Action Step 2**

Provision renewed TLS certificate.

6. ASSESSMENT METHODOLOGY & VERIFICATION

This report is generated automatically by CyberGuardian AI based on automated telemetry, deterministic pattern matching, YARA signature inspection, network port analysis, and threat intelligence feeds. It represents a point-in-time security
